

Amendment to the Claims:

1-21. (Canceled)

22. (Currently Amended) An apparatus comprising:

~~a server arranged for communication with a portable radio communication device for downloading adaptation data onto said device,~~

a memory for storing said adaptation data;

access means for allowing access to said adaptation data stored on said ~~server~~ apparatus for downloading from said memory of said ~~server~~ apparatus to said a portable radio communication device;

an interface for responding to downloading means for downloading said adaptation data from said memory of said ~~server~~ apparatus to said portable radio communication device;

monitoring means for monitoring the downloading of said adaptation data from said ~~server~~ apparatus to provide output data;

data generation means for generating data based on the output data of said monitoring means; and

computing means for computing remuneration data related to the adaptation data and based on the generated data, said remuneration data being based on the level of successful downloads from the ~~server~~ apparatus.

23-29. (Canceled)

30. (Currently Amended) A portable radio communication device according to claim 24 ~~41~~, wherein the acceptance signal contains an indication that the adaptation data has been successfully applied to the electronic content.

31. (Canceled)

32. (Currently Amended) A ~~server~~ An apparatus according to claim 22, wherein the computing means computes remuneration data only if the generated data comprises an indication that the adaptation data has been successfully applied to the electronic content.

33. (Currently Amended) A method ~~for downloading adaptation data from a server to a portable radio communication device, said method~~ comprising:

providing electronic content for storage on a memory of said portable radio communication device;

providing adaptation data on a memory of said server;

allowing access to said adaptation data on said server for downloading from said memory of said server to said portable radio communication device;

downloading said adaptation data from said memory of said server to said portable radio communication device;

monitoring download of said adaptation data and generating data based on the output data of said monitoring ~~downloading of said adaptation data~~; and

computing remuneration data including monitoring the volume of downloads that the server is performing and computing the payment to be made to a content provider on the basis of the level of successful downloads from the server.

34. (Currently Amended) A method ~~for downloading adaptation data from a server to a portable radio communication device, said method~~ comprising:

providing electronic content for storage on a memory of said portable radio communication device;

providing adaptation data on a memory of said server;

allowing access to said adaptation data on said server for downloading from said memory of said server to said portable radio communication device;

downloading said adaptation data from said memory of said server to said portable radio communication device;

monitoring download of said adaptation data;

~~and generating data based on the output data of said monitoring downloading of said adaptation data;~~

receiving a signal that the download of adaptation data has been successfully received;

and

registering receipt of said signal in a counter.

35. (New) An apparatus comprising:

a memory storing adaptation data, and a download controller, said download controller configured to communicate with an operator server and to respond to a request from an operator server for adaptation data by accessing said memory and transmitting said adaptation data to an operator server, said apparatus configured to compute remuneration data on the basis of the level of successful downloads of adaptation data.

36. (New) An apparatus according to claim 35, said server having an account register.

37. (New) An apparatus according to claim 35, said server having a counter configured to monitor the level of downloads that the server is performing.

38. (New) A method comprising:
in a server comprising a download controller and a memory storing adaptation data, receiving a request from an operator server for adaptation data;
in response to said request, accessing said adaptation data and transmitting said adaptation data to an operator server;
monitoring the level of downloading that the server is performing; and
computing remuneration data on the basis of the level of successful downloads of adaptation data from the server.

39. (New) A method according to claim 38 including authenticating said request.

40. (New) A method according to claim 38, comprising receiving a signal from an operator server that a download of adaptation data has been successfully received.

41. (New) An apparatus comprising:

a transceiver, a memory and a controller, said memory being configured to store electronic content, said controller being configurable to cause said transceiver to transmit a request for adaptation data from a server, the request comprising an identifier of electronic content stored in said memory and security data, said transceiver being configured to receive adaptation data, said controller being configured to modify electronic content stored in said memory by applying to the electronic content the received adaptation data to provide adapted data which is stored in said memory, said transceiver being configured to transmit an acceptance signal in response to said storing of said adaptation data.

42. (New) An apparatus according to claim 41, said electronic content comprising original games content and said adaptation data comprising supplementary software for modifying said original games content.

43. (New) A method comprising:

downloading adaptation data from the memory of a server to an apparatus comprising a transceiver, a memory and a controller, said memory including electronic content;

applying the adaptation data to set electronic content so as to modify the electronic content to provide adapted electronic content; and
generating data based on the applying of the adaptation data to the electronic content.

44. (New) A method according to claim 43, said electronic content comprising original games content and said adaptation data comprising supplementary software for modifying said original games content.

45. (New) An apparatus comprising:
a memory configured to store adaptation data;
a gateway configured to at least selectively allow access to the adaptation data stored on the apparatus for downloading from the memory of the apparatus to a portable radio communication device;
a download controller configured to permit the downloading the adaptation data from the memory of the apparatus to the portable radio communication device; and
an account register system configured to monitor the volume of downloads from the apparatus and to compute remuneration data related to the adaptation data and based on generated data from the portable radio communication device if the generated data includes an indication that the adaptation data has been successfully applied to the electronic content.
